

Dataset Description

Finance & Accounting Courses Dataset

1. Dataset Title

Udemy Finance & Accounting Courses Dataset

2. Dataset Source

This dataset was collected from Udemy, one of the world's largest online learning platforms. It captures detailed information on Finance and Accounting courses, including course details, ratings, pricing, reviews, and subscriber counts.

3. Business Domain

E-Learning / Online Education

This dataset sits within the online education industry and focuses specifically on Finance and Accounting courses offered on Udemy. It can be used to analyze course popularity, pricing strategy, customer satisfaction, and instructor performance.

4. Number of Rows and Columns

- Rows (records): 13,608
- Columns (variables): 20

5. Description of Each Variable

Variable	Description
id	Unique identifier assigned to each course.
title	Title of the course as listed on Udemy.
url	Web address of the course page.
is_paid	Indicates whether the course is paid or free.
num_subscribers	Total number of students enrolled in the course.
avg_rating	Overall average rating of the course.
avg_rating_recent	Average rating based on recent student reviews.
rating	Overall course rating score.
num_reviews	Number of student reviews submitted.

Variable	Description
is_wishlisted	Number of users who added the course to their wishlist.
num_published_lectures	Number of lectures included in the course.
num_published_practice_tests	Number of practice tests included in the course.
created	Date the course record was created.
published_time	Date and time the course was published.
discount_price__amount	Discounted course price, numeric value.
discount_price__currency	Currency of the discounted price.
discount_price__price_string	Discounted price displayed as text.
price_detail__amount	Original course price, numeric value.
price_detail__currency	Currency of the original price.
price_detail__price_string	Original price displayed as text.

6. Why This Dataset Was Selected

This dataset was selected because it offers a large volume of real-world records spanning numerical, categorical, and date/time variables. It provides enough depth to support descriptive analysis, visualization, statistical analysis, and predictive modeling, while representing a genuine business scenario within the online education industry.

7. Business Problem or Analytical Objective

The primary objective is to analyze the factors that drive the popularity and success of Finance and Accounting courses on Udemy. Specifically, the analysis aims to:

- Identify the characteristics of highly subscribed courses.
- Examine the relationship between course price and enrollment.
- Investigate how ratings and reviews influence course popularity.
- Compare the performance of free versus paid courses.
- Provide recommendations for pricing and course development strategy.

8. Why the Dataset Satisfies the Project Requirements

- Contains 13,608 observations, providing sufficient data for meaningful analysis.
- Includes 20 variables spanning numerical, categorical, text, and datetime types.
- Supports a range of business analytics techniques, including data cleaning, exploratory data analysis (EDA), visualization, correlation analysis, and predictive modeling.

- Addresses a real-world business problem within the e-learning industry.
- Is large enough to produce reliable insights and practical business recommendations.
